Scientific Integrity - Updated Version (Webinar)

The Workshop addresses scientists from the field of engineering and all who work with empirical or experimental methodology.

The major objective of the workshop “Good Scientific Practice - Protecting Scientific Integrity” is to know and understand the basic rules and values of the responsible conduct of research in all its stages, according to local, national and international regulations and guidelines. The participants will explore the differences and grey areas between good scientific practice, questionable research practice and scientific misconduct. They will learn how misconduct can be recognized and prevented, and how it should be addressed and dealt with in case it occurs, and what damage it can cause if handled improperly. The participants will learn to develop appropriate solutions for difficult situations in the process of science and receive advice on how to protect their scientific work. They are encouraged to speak with colleagues and the appropriate institutions about mistakes and problems.

The content of the workshop follows the curriculum “Good scientific practice” which was commissioned by and developed in cooperation with the German Research Ombudsman:

- Definitions of good scientific practice and scientific misconduct
- Degrees and extent of scientific misconduct
- Examples for responsible and irresponsible conduct of research
- Data and source management
- Authorship and the process of publication
- Mentoring and supervision tools
- Conflict management: how to deal with scientific misconduct
- Reactions to scientific misconduct
- Local, national and international guidelines and regulations

The online workshop encourages the active involvement of the participants and features the following didactic elements: case discussions, breakout rooms for small group work, single person working sessions, plenary discussion, information input. Additional material and other resources will be provided after the workshop.
