

## Scientific Writing in Life Science

Scientific writing is difficult. Many PhD candidates and scientists often struggle with writing journal articles or their thesis, while simultaneously completing time-consuming research projects. In addition, the standards for the publication of journal articles are increasing so there is pressure to publish high quality papers.

With discipline and commitment, scientific writing is a skill that can be learned and mastered. In this workshop, you will acquire a set of “how-to” strategies for writing journal articles and theses, and for increasing writing productivity.

### Please note

During the workshop, participants can draft part of their current writing project, for example a journal article or a thesis (1 to 2 pages). Therefore participants are asked to decide in advance which writing task they want to do during the workshop.

Ideally, participants should already have started their research project and be at the stage of writing (in order to take the most advantage from the workshop).

The workshop is especially useful for advanced PhD candidates from Life Sciences.

### Day 1

- Common challenges and misunderstandings in scientific writing
- The stages of the writing process
- Clear scientific writing
- The sections of a scientific article
- The paragraph as a basic writing unit

### Day 2

- How to create figures and tables
- How to organize the flow of information
- Techniques and software available to increase writing productivity
- Team work with co-authors and supervisors
- How to organize time in order to reach writing goals

**Trainer:** Andrea Sanchini

**This course will be held in English and online.**

### WHEN

03.03.2021	09:00 - 13:30
04.03.2021	09:00 - 13:30
05.03.2021	09:00 - 13:30
