

RDM Sprint – Managing your research data in one day

Good scientific practice requires scientists to archive their research data for 10 years. In addition, however, the demand for the possibility of publishing research data is also increasing. More and more journals and also funders, like the DFG or BMBF, now demand that associated research data be published in addition to scientific articles. Therefore, a good research data management is required.

In this course we want to support you in the preparation of your research data. This is going to be a real sprint for the management of your research data. After an introductory course where you will learn the basics on research data management, you will be able to work independently on the preparation of your data. In the given time span of in total 8 hours our team will support you through individual consulting if problems or questions arise. The goal is that at the end of the course, you have the knowledge and the tools to prepare your data for publication.

Our course aims at improving your knowledge on research data management and enabling you to manage and prepare your research data for publication.

Content

- Learn the basics about research data management and its importance
- What needs to be considered when sharing research data
- Improving your skills to manage your own research data

Methods

Presentations, individual consulting, guidance.

The sprint will take place virtually. Access to a computer with headset and camera should be guaranteed.

Notice

This workshop will be held in English. A German workshop will take place in 1/2023.
