

Information on the Organic Chemistry Internship for Biotechnology students

The teaching lab "Organic Chemistry for Biotechnology Students" course takes place once a year from mid of October until Christmas every Thursday and Friday in Hagenring 30. Experiments showcasing the basic organic reactions mechanisms (e.g. nucleophilic substitution, electrophilic addition, electrophilic aromatic substitution, carbonyl chemistry, pericyclic reactions) are performed. A successful exam of the lecture OC-1 (Fundamental Organic Chemistry) is highly recommended. The enrollment takes place via "Stud.IP": <https://studip.tu-braunschweig.de/>. Deadlines will be announced by there as well.
