Concrete Structures -IPACS**

REPORT BE96-3843/2001:39-7

Mechanical Models of the Stress-Strain Behaviour of Young Concrete in Axial Tension and Compression

Alexander-W. Gutsch¹

Ferdinand S. Rostásy²

^{1,2} *Institut für Baustoffe, Massivbau und Brandschutz,
Technische Universität Braunschweig*

PUBLISHED BY
DEPARTMENT OF CIVIL & MINING ENGINEERING
DIVISION OF STRUCTURAL ENGINEERING

ISBN 91 - 89580 - 39 - 7 • 2001:39-7 • SE

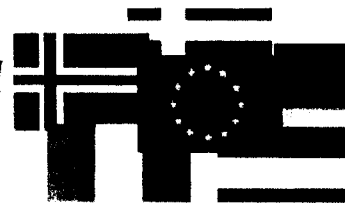

Contents

1	INTRODUCTION	1
1.1	Models for the ascending branch of the stress strain line (pre-peak-area)	1
1.2	Models for the descending branch of the stress-strain line (post-peak-area)	2
2	EXPERIMENTAL WORK	7
2.1	Concrete compositions	7
2.2	Test specimens and test set-up	7
3	TEST RESULTS	9
3.1	Stress-strain line under tension	9
3.2	Tensile strength	10
3.3	Elastic modulus in axial tension	12
3.4	Ultimate tensile strain at tensile strength	13
3.5	Fracture energy	14
3.6	Characteristic length	16
4	MODEL FOR THE STRESS-STRAIN LINE UNDER TENSION	17
4.1	Formulation of σ - ε -line	17
4.2	Failure criterion	21
5	EFFECTIVE STRENGTH IN STRUCTURE	22
6	MODEL FOR DE- AND RELOADING	23
7	STRESS-STRAIN LINE FOR AXIAL COMPRESSION	24
8	CONCLUSIONS	25
9	LITERATURE	26

REPORT BE96-3843/2001:38-9

Viscoelastic behaviour of Early Age Concrete

Alexander-W. Gutsch¹

¹ *Institut für Baustoffe, Massivbau und Brandschutz,
Technische Universität Braunschweig*

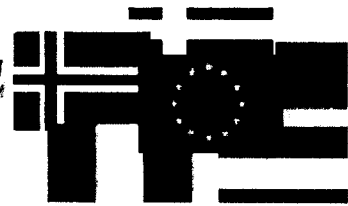

PUBLISHED BY
DEPARTMENT OF CIVIL & MINING ENGINEERING
DIVISION OF STRUCTURAL ENGINEERING

ISBN 91 - 89580 - 38 - • 2001:38-9 • SE

Contents

1	INFLUENCE OF ELEVATED TEMPERATURE ON CREEP AND RELAXATION OF EARLY AGE CONCRETE	1
1.1	Introduction	2
1.2	Experiments	2
1.3	Experimental results and modelling	3
1.4	Conclusions	11
1.5	References	11
2	PROPERTIES OF EARLY AGE CONCRETE -EXPERIMENTS AND MODELLING	12
2.1	Introduction	12
2.2	Experiments	13
2.3	Experimental results and modelling	13
2.3.1	Heat release and degree of hydration	13
2.3.2	Mechanical short-term properties	13
2.3.3	Viscoelastic behaviour	16
2.4	Conclusions	19
2.5	References	19
2.6	Appendix	20

Test Results and Modelling of Autogenous Deformations of Concrete at Early Age

*Alexander-W. Gutsch*¹

*Ferdinand S. Rostásy*²

Contents

1 INTRODUCTION	1
2 DIFFERENT KINDS OF VOLUME CHANGE OF CONCRETE AT EARLY AGE.....	1
3 EXPERIMENTAL WORK	2
3.1 Concrete compositions.....	2
3.2 Test set-up.....	4
4 TEST RESULTS	6
4.1 Autogenous shrinkage of normal strength concrete (CO 1)	6
4.2 Autogenous shrinkage of high strength concrete	8
5 MODELLING OF AUTOGENOUS SHRINKAGE.....	10
5.1 Isothermal conditions under $T = 20\text{ }^{\circ}\text{C}$	10
5.2 Effect of water/binder-ratio and content of silica-fume on autogenous shrinkage.....	12
5.3 Temperature effect	13
6 CONCLUSIONS.....	15
7 LITERATURE	15
