

Technische Universität Braunschweig | Institut für Geomechanik und Geotechnik
Beethovenstraße 51b | 38106 Braunschweig | Deutschland

With around 17,000 students and 3,800 employees, the **Technische Universität Braunschweig** is one of Germany's leading institutes of technology. It stands for strategic and performance-oriented thinking and acting, relevant research, committed teaching, and the successful transfer of knowledge and technologies to the economy and society. We consistently advocate for family friendliness and equal opportunities.

Our research focuses are mobility, engineering for health, metrology, and city of the future. Strong engineering and natural sciences are our core disciplines. These are closely interconnected with economics, social and educational sciences and humanities.

Our campus is located in the midst of one of the most research-intensive regions in Europe. We work successfully together with over 20 research institutions in our neighborhood as we do with our international partner universities.

Starting from April 1, 2024, the Institute of Geomechanics and Geotechnical Engineering (Institut für Geomechanik und Geotechnik, IGG) is looking for a

PhD position (m/f/d) in the field of

“Investigation of hydro-mechanical interactions of building structures, soil, and water”

(EG 13 TV-L, full-time/part-time)

The position is initially to be filled on a fixed-term basis for a period of three years. The successful applicant will be given the opportunity to pursue a doctorate for further scientific qualification.

The Institute of Geomechanics and Geotechnical Engineering at TU Braunschweig is working on current geomechanical and geotechnical topics in fundamental and applied research with relevance to the building industry, to our society, and to our planet. In our research we address demands of environmental and climate protection, also considering sustainability and aspects of digitisation. Following the appointment to the new professorship in spring 2024, the institute will be reordered based on its experience in the fields of geotechnical measurements, onshore and offshore geotechnics, underground space construction, and deep geological nuclear waste repositories. Future research focuses on fundamental geomechanical topics from the point of view of materials science, on new foundation technologies as well as current topics of tunnel construction. Our research is aimed at a better understanding of material behaviour of all kinds of geomaterials as well as at the development of robust or resilient geotechnical structures and construction methods. To reach these goals, we apply and develop experimental and numerical methods. We highly estimate interdisciplinary and cross-disciplinary approaches, national and international collaborations and the publication of research results and data.

Your tasks

- You will carry out fundamental or applied geotechnical research focusing on the interaction of building structures, soil and water flow. Within the framework of this research we plan the collaboration with the Leichtweiß-Institute for Hydraulic Engineering and Water Resources (Leichtweiß-Institut für Wasserbau, LWI) and the Coastal Research Centre (Forschungszentrum Küste, FZK), operating the Large Wave Flume (Großer Wellenkanal, GWK) in Hannover.
- You will assist in fund raising and in the execution of research projects, especially in proposal

writing for a collaborative research project with LWI and FZK which might act as a continuation project.

- You will publish research findings and participate in national and international conferences.
- You will be involved in teaching at the University (preparation and implementation of courses as well as supervision of students' work).

Your Qualifications

- You have a degree (Master's or equivalent) ideally in the field of *Civil Engineering* with focus on geotechnical engineering, hydraulic engineering or coastal protection.
- You have very good knowledge of the German and English language.
- You have experiences in the field of *experimental research* (lab and model tests, measurement techniques) and in the field of *numerical simulations* (finite element method, particle based methods, computational fluid dynamics, CFD) or you are willing to become acquainted with new methods and fields of work.
- You are flexible and a team player.
- Your research is driven by curiosity and by an intrinsic motivation.
- You are aiming for a doctorate.

We offer

- Work on exciting future-oriented research topics in an inspiring work environment as part of the university community.
- A research environment with a well equipped geotechnical laboratory with experimental hall as well as collaborations with other research facilities.
- A vibrant campus life in an international atmosphere with lots of intercultural offers and international cooperations.
- Pay in accordance with the collective agreement TV-L (a special payment at the end of the year as well as a supplementary benefit in the form of a company pension, comparable to a company pension in the private sector) including 30 days' vacation per year.
- Flexible working and part-time options and a family-friendly university culture, awarded the "Family-friendly university" audit since 2007.
- Special continuing education programs for young scientists, a postdoc program, as well as other offerings from the Central Personnel Development Department and sports activities.

Further notes

We welcome applicants of all nationalities. At the same time, we encourage people with severe disabilities to apply. Applications from severely disabled persons will be given preference if they are equally qualified. Please attach a proof of disability to your application. We are also working on the fulfilment of the Central Equality Plan based on the Lower Saxony Equal Rights Act (*Niedersächsisches Gleichberechtigungsgesetz—NGG*) and strive to reduce under-representation in all areas and positions as defined by the NGG. Therefore, applications from woman are particularly welcome in this case.

The personal data will be stored for the purpose of processing the application. By submitting your application, you agree that your data may be stored and processed electronically for application purposes in compliance with the provisions of data protection law. Further information on data protection can be found in our data protection regulations at <https://www.tu-braunschweig.de/datenschutzerklaerung-bewerbungen> . Application costs cannot be reimbursed.

Questions and Answers

For more information, please call the designated professor Dr.-Ing. habil. Marius Milatz on +49 (0) 40 42878-3660 or send an email to marius.milatz@tuhh.de.

Deadline for applications is March 10, 2024.

Are you interested? Please send your application preferably via email to Ms. Brigitte König-Stockburger: brigitte.koenig@tu-braunschweig.de
