

Figure S1: Representative dimension reduced electropherogram of one gel lane.

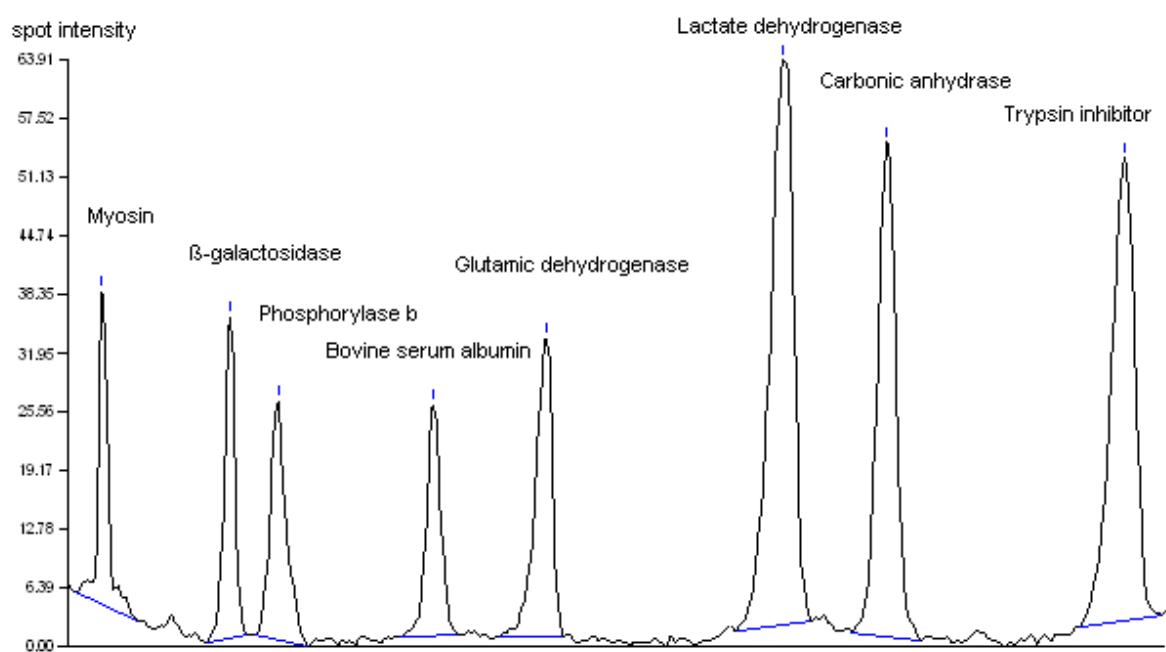

Figure S2: Linearity of Mark 12™ Unstained Standard, part 1.

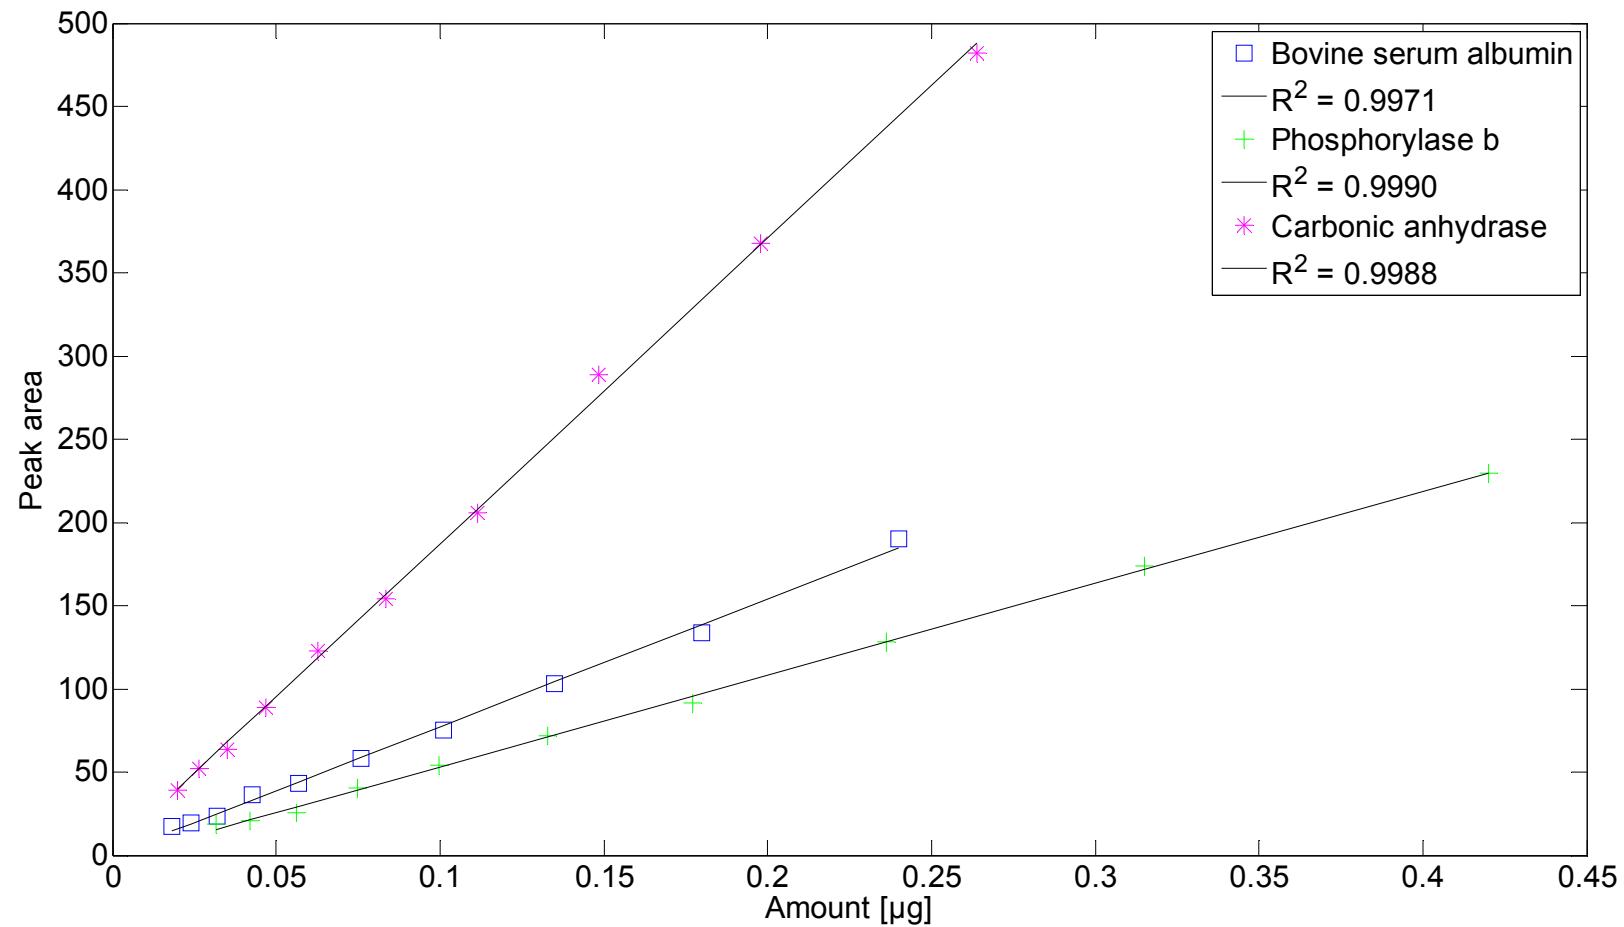

Figure S3: Linearity of Mark 12™ Unstained Standard, part 2.

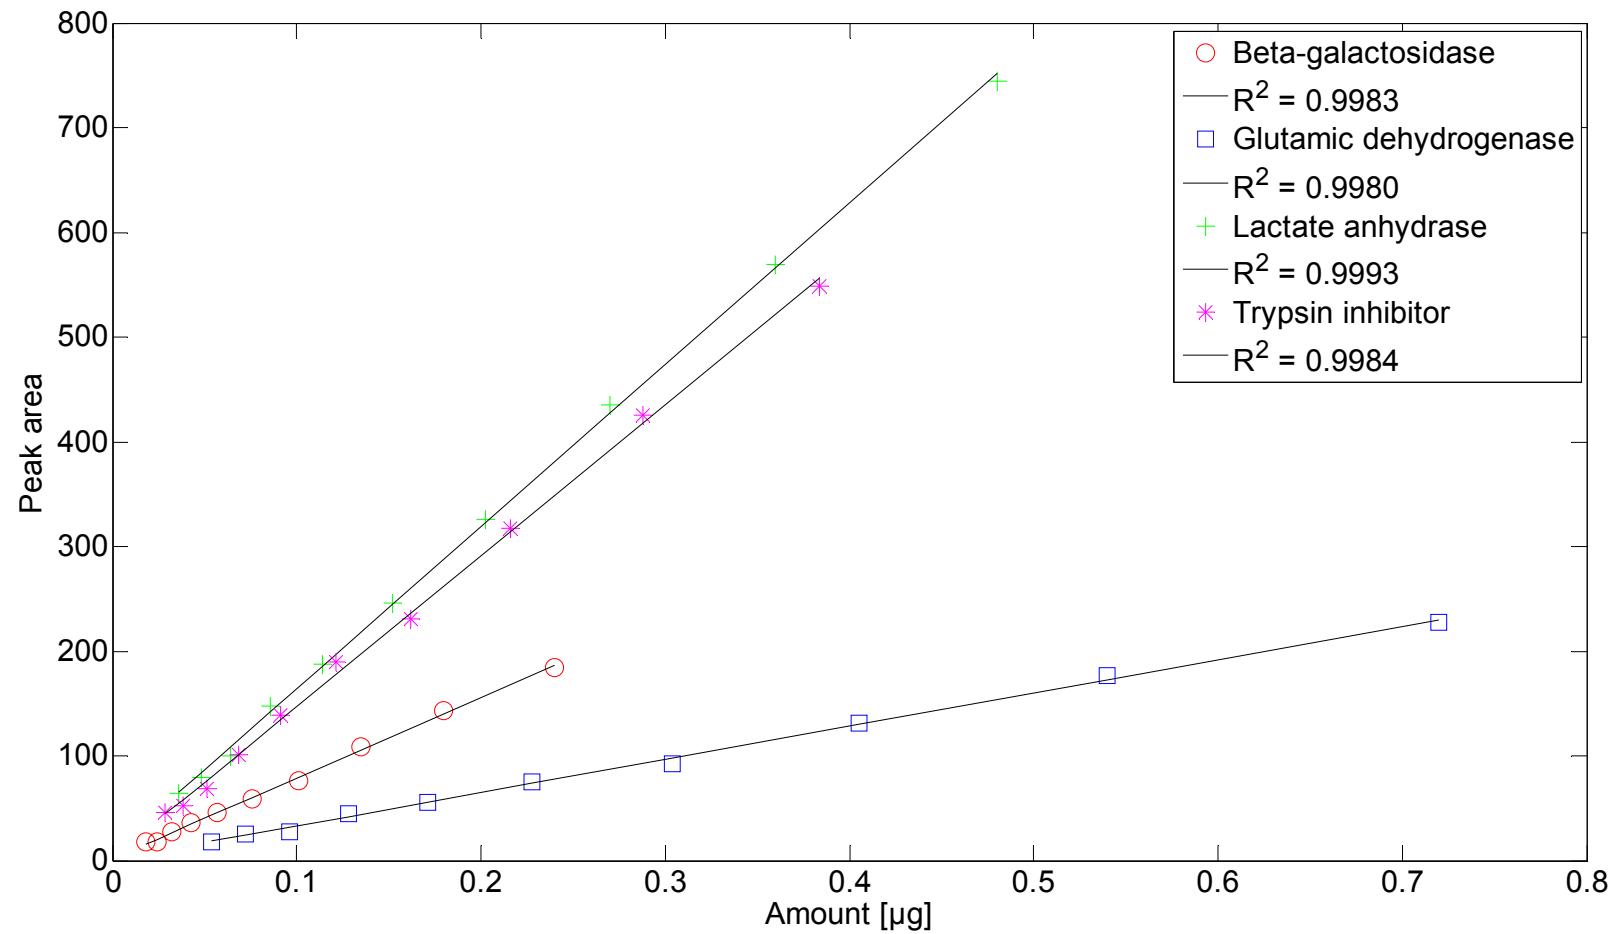

Figure S4: Regression plot for glutamic dehydrogenase with 95% confidence interval,  $R^2=0.9980$ .

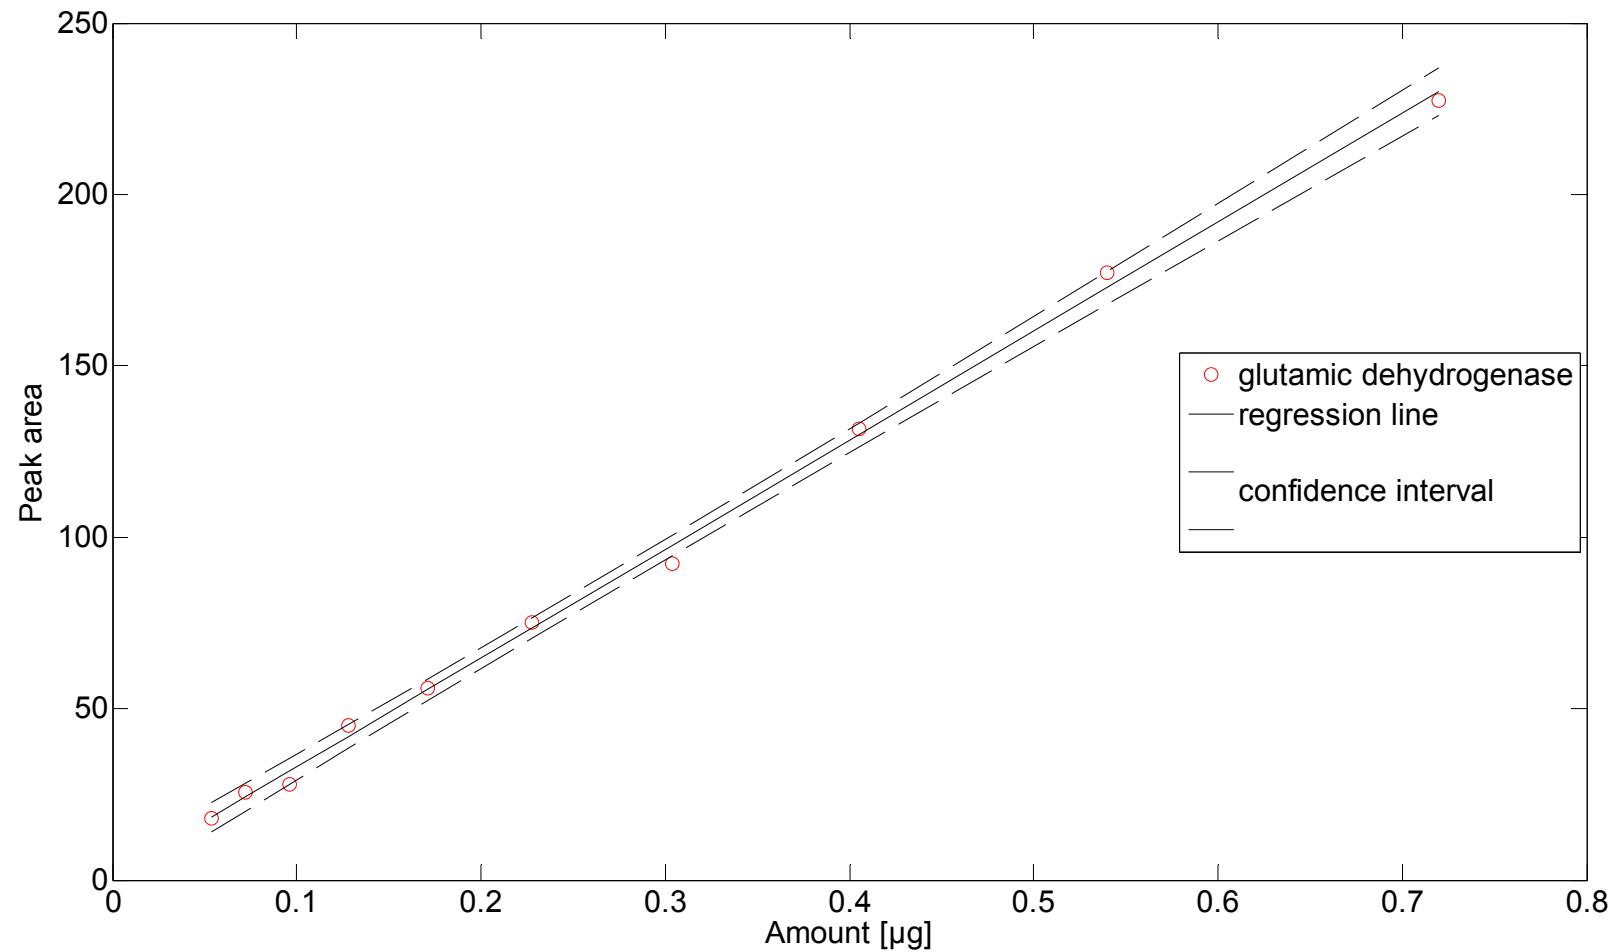

Figure S5: Regression plot for bovine serum albumin with 95% confidence interval,  $R^2=0.9971$ .

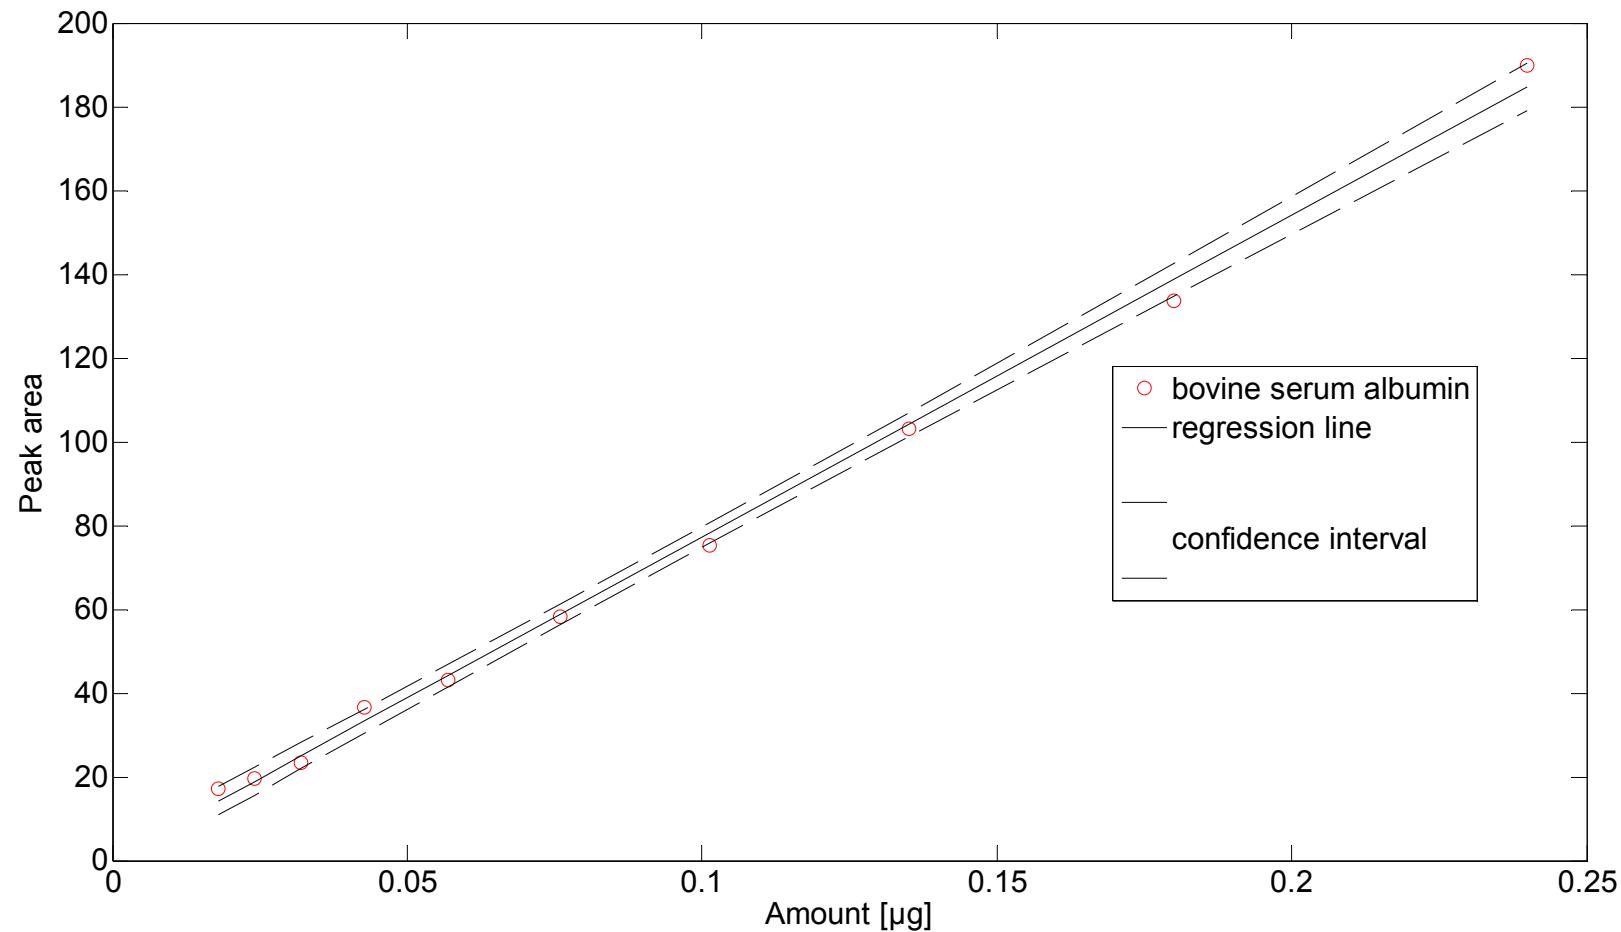

Figure S6: Exemplary workflow, corresponding to Table 4.

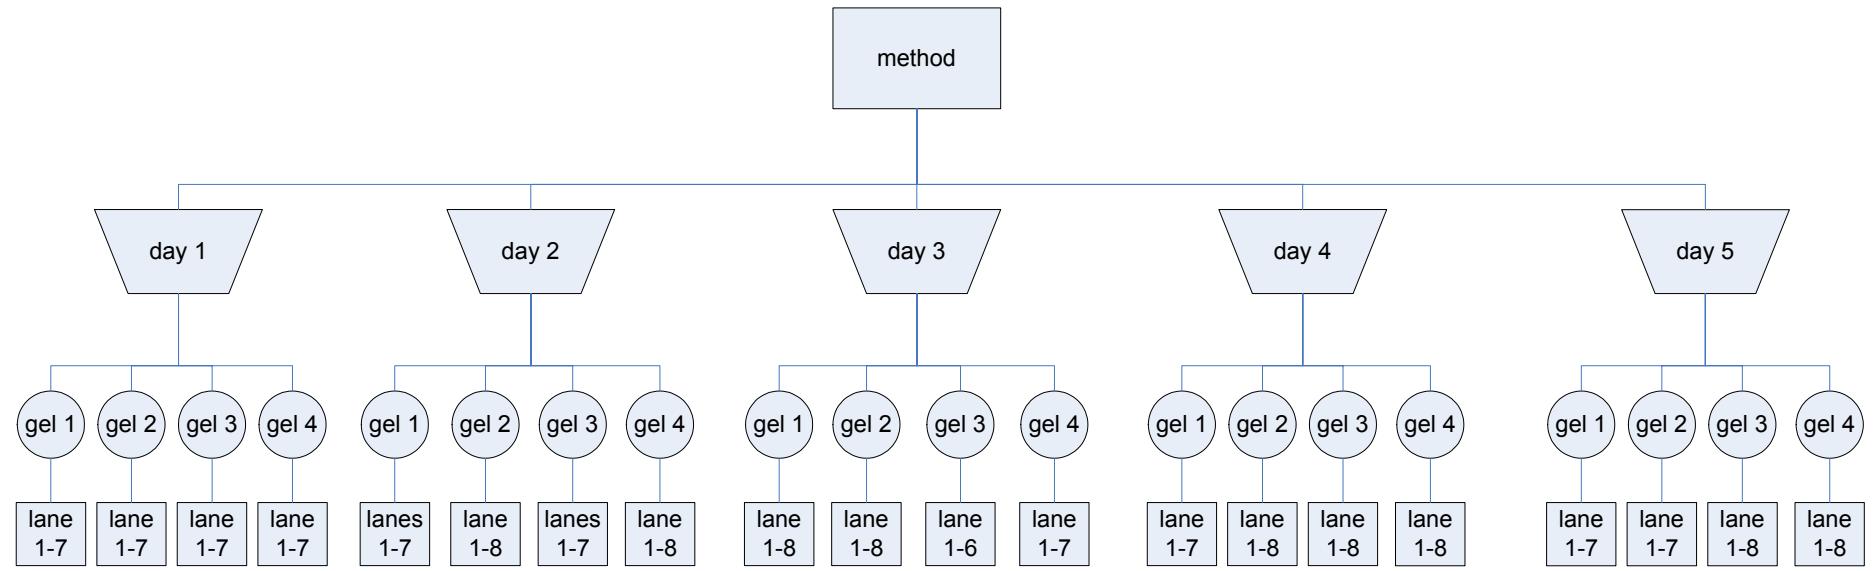

Table S1: Detector-dependant precision: Odyssey and Fla-9000.

Proteins	RSD% pooled, higher speed <sup>a</sup> , Odyssey [%]	RSD% pooled, higher speed <sup>a</sup> , Fla-9000 [%]	F <sub>0</sub>	F <sub>crit</sub>	F-test		RSD% pooled, lower speed <sup>b</sup> , Odyssey [%]	RSD% pooled, lower speed <sup>b</sup> , Fla-9000 [%]	F <sub>0</sub>	F <sub>crit</sub>	F-test	
β-galactosidase	2.11	2.63	1.54	14.25	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	4.63	5.12	1.22	15.44	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Phosphorylase b	3.77	2.86	1.74	4.15	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	4.51	5.20	1.33	15.44	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Bovine serum albumin	2.80	2.52	1.23	4.15	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	4.77	2.73	3.05	15.44	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Glutamic dehydrogenase	2.34	2.94	1.58	14.25	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	3.00	2.53	1.40	15.44	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Lactate dehydrogenase	1.24	1.22	1.03	4.15	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	2.80	1.70	2.70	15.44	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Carbonic anhydrase	1.05	1.39	1.75	14.25	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	2.42	1.86	1.70	15.44	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Trypsin inhibitor	1.53	1.85	1.45	14.25	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	3.26	2.57	1.60	15.44	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Number of gels	n = 4	n = 16					n = 4	n = 4				

a) staining and destaining at high agitation speed (50 min<sup>-1</sup>) and room temperature

b) staining and destaining at low agitation speed (30 min<sup>-1</sup>) and room temperature

Table S2: Temperature-dependant and agitation speed-dependant precision.

Proteins	RSD% pooled <sup>a</sup> , 4 °C [%]	RSD% pooled <sup>a</sup> , 20°C [%]	F <sub>0</sub>	F <sub>crit</sub>	F-test		RSD% pooled <sup>b</sup> , lower speed [%]	RSD% pooled <sup>b</sup> , higher speed [%]	F <sub>0</sub>	F <sub>crit</sub>	F-test	
β-galactosidase	2.49	2.54	1.04	14.18	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	4.87	2.54	3.69	3.05	F <sub>0</sub> > F <sub>crit</sub>	significant difference
Phosphorylase b	3.86	3.05	1.60	3.90	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	4.85	3.05	2.53	3.05	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Bovine serum albumin	4.93	2.57	3.67	3.90	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	3.92	2.57	2.33	3.05	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Glutamic dehydrogenase	2.71	2.84	1.10	14.18	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	2.78	2.84	1.04	4.48	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Lactate dehydrogenase	2.23	1.22	3.32	3.90	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	2.34	1.22	3.64	3.05	F <sub>0</sub> > F <sub>crit</sub>	significant difference
Carbonic anhydrase	2.16	1.33	2.62	3.90	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	2.17	1.33	2.64	3.05	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Trypsin inhibitor	2.58	1.79	2.07	3.90	F <sub>0</sub> < F <sub>crit</sub>	no significant difference	2.95	1.79	2.70	3.05	F <sub>0</sub> < F <sub>crit</sub>	no significant difference
Number of gels	n = 4	n = 20					n = 8	n = 20				

a) temperature-dependant precision: staining and destaining at 4 °C or room temperature and constant high shaking rate

b) agitation speed-dependant precision: staining and destaining at high or low shaking rate and at room temperature

Table S3: Variance analysis of the total error and corresponding effective degrees of freedom, precision at high shaking rate and room temperature (20 gels, corresponding to Fig. 4 A in the article).

Proteins	$\hat{\sigma}_{\text{lanes}}^2$ , $df_{\text{lanes}} =$ 128	$\hat{\sigma}_{\text{gels}}^2$ , $df_{\text{gels}} =$ 15	$\hat{\sigma}_{\text{days}}^2$ , $df_{\text{days}} =$ 4	$\hat{\sigma}_{\text{total}}^2$	RSD% total [%]	Effective degrees of freedom $df_{\text{eff}}$	Contribution to total variance [%]: lane-to-lane	Contribution to total variance [%]: gel-to-gel	Contribution to total variance [%]: day-to-day
